

PAVEL DUBOVIK

Frontend Developer | Interactive Interfaces & Performance Optimization

Russia, Novosibirsk | pavel.dubowick@yandex.ru | Telegram: @wannabegood

ABOUT ME

Frontend Developer with 2 years of experience in commercial development of promotional projects in iGaming and FinTech. I develop complex interactive interfaces and web animations, using a component-based approach. I integrate REST APIs, WebSockets, analytics systems, and third-party services such as reCAPTCHA, and implement business logic and state management using Redux Toolkit. By switching to Astro, I reduced the average page weight by half, and using GSAP, I optimized animation workflows—cutting the amount of animation code by 60% and significantly speeding up the development process. English: B1.

KEY SKILLS

JavaScript (ES6+) | JS | TypeScript | TS | Strong typing | HTML / HTML5 | Semantic HTML | CSS / CSS3 | Cross-browser compatibility | Responsive Design | Adaptive design | Mobile optimization | React | React.js | Next.js | SSR | SSG | ISR | Server-Side Rendering | Static Site Generation | Astro | State Management | Redux | Redux Toolkit | RTK | CSS Modules | Tailwind | Tailwind CSS | UI Kits | Material UI | MUI | Web Vitals | LCP | CLS | INP | Performance Optimization | Web Performance | Lazy Loading | Web Animation | GSAP | Framer Motion | Lenis | Testing | Unit Testing | Jest | E2E Testing | Cypress | Version Control Systems | Git | GitHub | Project Build | Vite | AI | AI Tools | AI-Tools in Development | AI-Assisted Coding | Containerization | Docker | Network Protocols | REST API | RESTful | Client-Server Architecture | WebSocket | WS | Accessibility | a11y | Figma | Working with UI/UX Mockups

WORK EXPERIENCE

RichMind, Novosibirsk, hybrid

Development of promotional campaigns for FinTech and iGaming products.

Frontend Developer

October 2024 – October 2026

- Initiated and implemented the use of Astro to develop SEO-optimized promotional pages; as a result, reduced the amount of client-side JavaScript through partial hydration and improved performance metrics (LCP, INP).
- Implemented a component-based approach to UI development, simplifying code maintenance and speeding up the creation of new interfaces.
- Initiated the transition to modern animation libraries (GSAP, Framer Motion) — as a result, improved the quality and expressiveness of complex animations, and accelerated the development of standard UI animations.
- Developed a modular architectural "skeleton" (Core Engine) based on React + TypeScript for iGaming promo products, standardizing the development process and reducing the time for development and launch of mini-games by 60%.
- Designed a client-side feedback module (form, state management, anti-spam protection, server response handling) and implemented it as a unified standard (UI/Logic SDK) for all company promo pages.

EDUCATION

Frontend Developer - HTML Academy: Web Development, JavaScript, React, UI/UX 2024

React Developer, Advanced Training - Yandex Practicum: TypeScript, RTK, WebSocket, session management 2025
